Summary

Cloud-focused software engineer with a cybersecurity background who likes taking an idea from rough workflow to working system. My strongest work is in cloud-backed applications, identity-aware APIs, and data pipelines where the design has to survive real users, real permissions, and real failure cases. I use AI tools like Claude Code as an engineering accelerator for planning, debugging, documentation, and implementation, while grounding the final work in Azure, Microsoft Entra ID, Terraform, Supabase, PostgreSQL, React, Node.js, C#/.NET, Microsoft Fabric, and Power BI.

Education

University of North Carolina at Charlotte, Charlotte, NC

Accelerated Master of Science in Cybersecurity

May 2027

Bachelor of Science in Computer Science, Cybersecurity Concentration

May 2026

Central Piedmont Community College, Charlotte, NC

Associate's Degree in Computer Science

May 2024

Experience

True Homes, Monroe, NC

Cybersecurity Rotational Intern

May 2026 – Aug 2026

- Built and shipped an enterprise role administration feature using C#/.NET, REST APIs, DevExtreme, EF migrations, Microsoft Entra ID, Microsoft Graph, RBAC, and Terraform.
- Provisioned cloud identity infrastructure across development, staging, and production environments using version-controlled Terraform, federated credentials, and secretless authentication patterns.
- Re-architected a metadata-driven analytics pipeline moving 40 business entities from Azure SQL into Microsoft Fabric, reducing the daily cycle from about 62 minutes to 4.
- Implemented row-count validation, persistent load logging, and variance reporting across a multi-hop data path to improve trust in downstream Power BI reporting.
- Built configuration-driven pipeline patterns using a control table and generator approach so new business entities could be onboarded through metadata instead of hand-mapped code.
- Used Claude Code to accelerate full-stack implementation, debugging, documentation, test planning, and technical handoff materials.

University of North Carolina at Charlotte, Charlotte, NC

Web Development Teaching Assistant

Dec 2024 – May 2026

- Supported 140+ students in web development, debugging, authentication, input validation, and secure coding fundamentals.
- Reviewed code, explained backend and frontend concepts, and helped students build, test, and improve full-stack web applications.
- Helped students reason through APIs, client-side state, data validation, deployment issues, and common bugs in JavaScript, HTML/CSS, and web application projects.

Technical Projects

Conoce Tu Profesor – Cloud Student Review Platform with AI Moderation

[Live Site](#)

- Built and launched a public education platform using React, Node/Express, Supabase Postgres, Google OAuth, protected routes, admin workflows, and deployment tooling.
- Designed cloud-backed data models for universities, professors, anonymous reviews, country-based search, moderation workflows, profile pages, and role-based admin access.
- Implemented AI-supported review moderation to flag vulgar, inappropriate, or out-of-scope submissions before they affected platform quality.
- Used Claude Code to accelerate full-stack development, database design, debugging, data seeding, authentication flows, and production-readiness cleanup.

Metadata-Driven Analytics Pipeline

True Homes

- Built a metadata-driven pipeline for 40 business entities using Microsoft Fabric, Azure SQL, PySpark, T-SQL, and Power BI reporting workflows.
- Replaced hand-mapped table logic with a control-table and generator approach so new entities could be onboarded through configuration instead of new code.
- Improved pipeline reliability with validation at each load stage, persistent logging, variance reporting, and parallel execution that reduced the full daily cycle by about 15x.
- Documented setup, assumptions, validation behavior, and handoff notes so the pipeline could be maintained by the data team after the internship.

Technical Skills

Cloud Platforms & Data: Azure, Microsoft Entra ID, Microsoft Graph, Terraform, Supabase, PostgreSQL, Azure SQL, Microsoft Fabric, Power BI, Row Level Security

Development: C#, .NET, Python, PySpark, SQL, T-SQL, JavaScript, TypeScript, React, Node.js, Express, REST APIs, HTML/CSS, Git, Azure DevOps

AI, Automation & Security: Claude Code, AI APIs, prompt engineering, AI-supported moderation, authentication, authorization, RBAC, PowerShell, KQL, workflow automation
