Summary

Cloud-focused software engineer with a cybersecurity background, drawn to the parts of cloud security where access, automation, and real engineering meet. I like building the systems that decide who can do what, then writing the tooling that proves those decisions are still correct. Through enterprise internship work and technical projects, I have used Microsoft Entra ID, Microsoft Graph, RBAC, Terraform, PowerShell, Splunk, and Claude Code to build IAM features, audit privileged access, tune alerts, and turn messy security signals into work an analyst can trust.

Education

University of North Carolina at Charlotte, Charlotte, NC

Accelerated Master of Science in Cybersecurity

May 2027

Bachelor of Science in Computer Science, Cybersecurity Concentration

May 2026

Central Piedmont Community College, Charlotte, NC

Associate's Degree in Computer Science

May 2024

Experience

True Homes, Monroe, NC

Cybersecurity Rotational Intern

May 2026 – Aug 2026

- Built and shipped a self-service role administration feature as sole developer using Microsoft Entra ID, app roles, security groups, Microsoft Graph, RBAC, C#/.NET, REST APIs, DevExtreme, EF migrations, and Terraform.
- Designed authorization so Microsoft Entra ID stayed the source of truth, with application roles backed by security groups and membership changes independently verified through Microsoft Graph.
- Provisioned identity infrastructure for dev, staging, and production as version-controlled Terraform, separating privileged directory resources from the automated deployment path.
- Created read-only privileged access audit tooling in PowerShell across identity and security platforms, normalizing incompatible role models into one comparable risk-based access review record.
- Tuned endpoint detection alerts and investigated notification reliability issues, reducing repeated noise and improving trust in security signals used by analysts.
- Investigated an email spoofing campaign using header forensics, gateway policy review, SPF/DKIM/DMARC analysis, and audit-mode remediation planning.
- Used Claude Code to accelerate implementation planning, debugging, test design, documentation, and interview-ready technical notes without replacing code review or validation.

University of North Carolina at Charlotte, Charlotte, NC

Web Development Teaching Assistant

Dec 2024 – May 2026

- Supported 140+ students in web development, secure coding, debugging, accessibility, authentication, input validation, and XSS prevention.
- Reviewed student code, explained vulnerabilities and fixes, and helped students build more reliable web applications through hands-on technical guidance.
- Reinforced practical security habits including least privilege, form validation, safe authentication patterns, and readable error handling during labs and project reviews.

Technical Projects

Security Event Pipeline and Threat Intelligence Analysis with Splunk SIEM

[GitHub](#)

- Deployed Cowrie SSH honeypot and Splunk Universal Forwarder to analyze 475+ security events across 44 attack sessions.
- Built 3 Splunk dashboards mapping attacker behavior to MITRE ATT&CK, detecting T1087, T1105, and T1548 across 72 commands.
- Developed 15+ SPL detection rules and correlation searches for attack identification, malicious commands, and credential theft attempts.
- Used Claude Code to speed up SPL iteration, dashboard planning, detection documentation, and attacker behavior summaries while validating results against raw event data.

Privileged Access Audit Tool

True Homes

- Designed a read-only PowerShell audit tool to answer who held elevated access across enterprise identity and security platforms.
- Traced inherited access through nested groups and normalized incompatible role models into a single comparable record for review.
- Built around failure-safe collection patterns including read-only permissions, cycle detection, platform-specific collectors, and clear evidence fields for each finding.
- Used Claude Code to accelerate implementation planning, script structure, documentation, edge-case analysis, and interview-ready project notes.

Technical Skills

Cloud Security & IAM: Microsoft Entra ID, Microsoft Graph, RBAC, app roles, security groups, Active Directory, OAuth 2.0 OBO flow, least privilege, NIST 800-53

Security Engineering: PowerShell, Splunk, SPL, SentinelOne, Microsoft Defender XDR, Mimecast, SPF/DKIM/DMARC, MITRE ATT&CK, Wireshark, Nmap, Burp Suite

Cloud, Development & AI: Azure, Terraform, C#, .NET, REST APIs, SQL, Python, KQL, Git, Azure DevOps, Claude Code, AI-assisted development, prompt engineering
